

Folder Exploder

This application allows you to unravel (explode) a folder and copied the unraveled folder or files to the destination folder

If resursive option is selected, all individual files in each subfolder will be copied

This app is also useful if you want to extra a particular file type from a bunch of folder. For example, if you enable the resursive option and enter .pdf in the advanced option below, then all the pdf files will be copied

Please enter the source directory. (Example: C:\Users\john.doe\Desktop\folder1)

Please enter the desination directory. (Example: C:\Users\john.doe\Desktop\folder2)

Please enter the depth of folder explotion in integer (0 or above). (0 mean simply copying the files in the directory.1 means explode the folder by 1 level

0

☐ Explode Resursively? (If this option is selected, then all individual items will be copied to the destination folder.

Advanced Options

This section allows you to explode files with selected characteristics using AND Condition

☐ Enable advanced options

Start with string (Only files start with this string will be copied)

End with string (Only files end this name will be copied) . (A good example will be ".html", ".xlsx", ".csv")

Contains (only files contains this string will be copied)
